Meticulously Crafted To Excel In Challenging Environments

The Bolt Nova series stands out as a remarkable range of indirect floodlights, boasting industry-leading performance of an unparalleled 147,000 lumens.

Distinguished by its unique Uni-Body design and dynamic heat control, the Bolt Nova not only delivers exceptional luminosity but also ensures optimal performance and longevity even in the harshest conditions.

DMX REQUIREMENTS

The Bolt Nova RGBW fixture with DMX is a **four channel dmx** unit. When placing an order, please indicate DMX address. (The DMX address will be listed on the back of the fixture). Do not connect more than 32 fixtures per DMX daisy chain.

DMX Address (W+RGB)				
Channel Fixture	Red Control (ex. X)	Green Control (ex. X+1)	Blue Control (ex. X+2)	White Control (ex. X+3)
#1	1	2	3	4
#2	5	6	7	8
#3	9	10	11	12

*The White Control channel adjusts the brightness of 3000K LEDs.

The DMX connection for this fixture must be **hard-wired**; please refer to the wiring diagram in the installation guide for detailed instructions. DMX cables are not included; please refer to the compatible DMX cabling list for more information. The final fixture on each daisy chain should be terminated by the use of a DMX terminator purchased from a 3rd party or from Meteor.

COMPATIBLE DMX CABLING LIST

DMX uses a cable consisting of two twisted pairs plus a shield to carry data. The cable must be specifically impedance matched for the digital DMX signal, meaning that microphone cable or other non-rated cable **must not be used to carry DMX**. Network cable (Cat5, 5e or 6 cable) may be used to carry DMX in an installation; however special consideration must be given to shielding and termination. Under no circumstances should solid core cable like Cat5 be terminated into a screw down connector.

Meteor recommends the use of Belden 9729 or Belden 9841 for DMX installation. Belden 9729/9841 is a two pair cable, which allows for a spare pair for 'out and back' type terminations if needed.
